WALL POINT FIXING

Pages 3.03 >> 3.19
WALL POINT FIXING

Adjustable wall point

Adjustment (1):
Adjustment of the wall point by ± 5 mm on the support by slot hole

Adjustment (3):
Height adjustment by 0 to ±3 mm from the support (wall, plasterboard, etc.) in relation to the glass via the body which is adjustable by tightening or loosening

Adjustment (2):
Bi-dimensional adjustment of the glass fixing screw by ±3 mm blind

Screws for glass:
Countersunk or cylindrical possible. See detailed pages of this section

Glass drilling details: see following pages

Arrangement of drilled holes

Height of wall points

The weight of the glass panel is not supported by the fixing points

Glass drilling details: see following pages

Recommendation / use

Glass thickness: 8 to 12 mm standard. Other dimensions: on request

The glass panel is laid on the ground and is weighed. Other applications: on request

Tightening of the glass screws: Monolithic tempered = Min. 15 N.m / Laminated tempered = 5 N.m

Screws for the wall: top or bottom cylindrical head Ø 8 hexagonal hollow (D912 or D7984) not supplied by SADEV. Anchor to be defined according to the nature of the wall. Not supplied by SADEV

If components are damaged they can be replaced by request.

Order form end of this chapter.

Finish: glass bead or brushed

If components are damaged they can be replaced by request.

Order form end of this chapter.
Wall points technical page

Fixed wall point

Adjustment (1):
Adjustment of the wall point by ± 5 mm by slot hole

Adjustment (3):
Height adjustment by 0 to + 3 mm from the support (wall, plasterboard, etc.) in relation to the glass via the body which is adjustable by tightening or loosening

Installation:
To ensure that the wall point and its anchor plug can hold a weight of 50 kg, the slot hole must ABSOLUTELY be HORIZONTAL.

Warning - adjustment:
References 01 00 10 & 01 00 20 have no possibility of adjustment. This implies that the glass drilling tolerance must be absolutely respected (± 0,5 mm)

Screws for glass:
Countersunk or cylindrical possible. See detailed pages of this section.

* Be careful about the quality of glass drilling

Recommendation / use

Glass thickness: 8 to 12 mm standard. Others: on request

The weight of the glass panel is supported by the fixings. Be careful about the quality of plugs in the wall and the direction of the oblong hole

Tightening of the glass screws:
Monolithic tempered = Min. 15 N·m Laminated tempered = 5 N·m

Screws for the wall:
top or bottom cylindrical head Ø 8 hexagonal hollow (D912 or D7984) not supplied by SADEV. Anchor to be defined according to the nature of the wall. Not supplied by SADEV.

If components are damaged they can be replaced by request.
Order form end of this chapter.
